The New Fiver - Key Security Features

The new Bank of England polymer £5 note, issued in September 2016. The new note is printed on polymer, which is a thin and flexible plastic material, and is 15% smaller than the paper £5 note. This film will run through a number of key security features. You can check these features to ensure notes are genuine.

A large see through window, with a clearly defined portrait of the Queen and the words '£5 Bank of England', printed twice. Around the edge of the window you will see a coloured border, which will change from purple to green when the note is tilted. The £ symbol in the window will also change from purple to green. A finely detailed metallic image of the Elizabeth Tower, positioned over the window will appear gold on the front of the note... ...and silver on the back.

Below the see through window on the front of the note, there is a silver foil patch containing a hologram which will change from the word 'FIVE' to the word 'POUNDS'. An image of the coronation crown appears three dimensional and will display a multi-coloured rainbow effect when tilted. On the back of the note you will see a green foil patch containing the word 'BLENHEIM'. And if you look at the front of the note under ultraviolet light, the number 5 will appear in bright red and green.
